College Name : Nannapaneni Venkat Rao College of Engineering and Technology Tenali

source code :

index.js file :

The screenshot shows a VS Code editor window with a project named 'crud'. The Explorer sidebar on the left shows the file structure: 'api' (controllers, db, model, routers), 'client', 'node_modules', 'env', '.gitignore', 'package-lock.json', and 'package.json'. The 'api' folder is expanded, and 'index.js' is selected. The main editor displays the content of 'index.js', which is a Node.js script using Express.js to create a RESTful API. The script imports 'path', 'express', 'dotenv', 'connectToDB', and 'userRoute'. It sets up an Express app, uses 'express.json()' for parsing, and serves static files from the 'client/dist' directory. A GET route is defined for '/api/user' that serves 'index.html' from the 'client/dist' directory. The app listens on port 5000 and logs the server status.

```
1 import path from 'path';
2 import express from 'express';
3 import { config } from 'dotenv';
4 import { connectToDB } from './db/connectToDB.js';
5 config();
6 import userRoute from './routers/user.routes.js'
7
8
9 const __dirname = path.resolve();
10 const app = express();
11
12 app.use(express.json());
13
14 app.use("/api/user", userRoute);
15
16 app.use(express.static(path.join(__dirname, "client/dist")));
17
18 app.get("", (req, res) => {
19   res.sendFile(path.join(__dirname, "client", "dist", "index.html"));
20 })
21
22 const PORT = process.env.PORT || 5000
23 app.listen(PORT, () => {
24   connectToDB();
25   console.log("Server is running on PORT : ", PORT)
26 })
```

The terminal at the bottom shows the command 'nodemon api/index.js' being executed. The output indicates that nodemon 3.1.0 is running, watching the project files, and starting the server on port 5000. The final output is 'DB connected successfully'.

MONGODB CONNECTION :

The screenshot shows the VS Code editor with the Explorer sidebar on the left. The file 'connectToDB.js' is selected under the 'db' folder. The main editor displays the code for 'connectToDB.js', which imports 'mongoose' and defines a 'connectToDB()' function that connects to a database using 'process.env.CONN_STR'. The terminal at the bottom shows the command 'nodemon api/index.js' and the output indicating a successful connection to the database on port 5000.

```
api > db > JS connectToDB.js > connectToDB
1 import mongoose from 'mongoose';
2
3 export function connectToDB(){
4   mongoose.connect(process.env.CONN_STR)
5     .then(()=>{
6       console.log("DB connected successfully")
7     })
8     .catch((err)=>{
9       console.log("Error while connecting to DB : ",err.message);
10    })
11 }
```

```
> nodemon api/index.js

[nodemon] 3.1.0
[nodemon] to restart at any time, enter `rs`
[nodemon] watching path(s): *.*
[nodemon] watching extensions: js,mjs,cjs,json
[nodemon] starting `node api/index.js`
Server is running on PORT : 5000
DB connected successfully
```

MODEL :

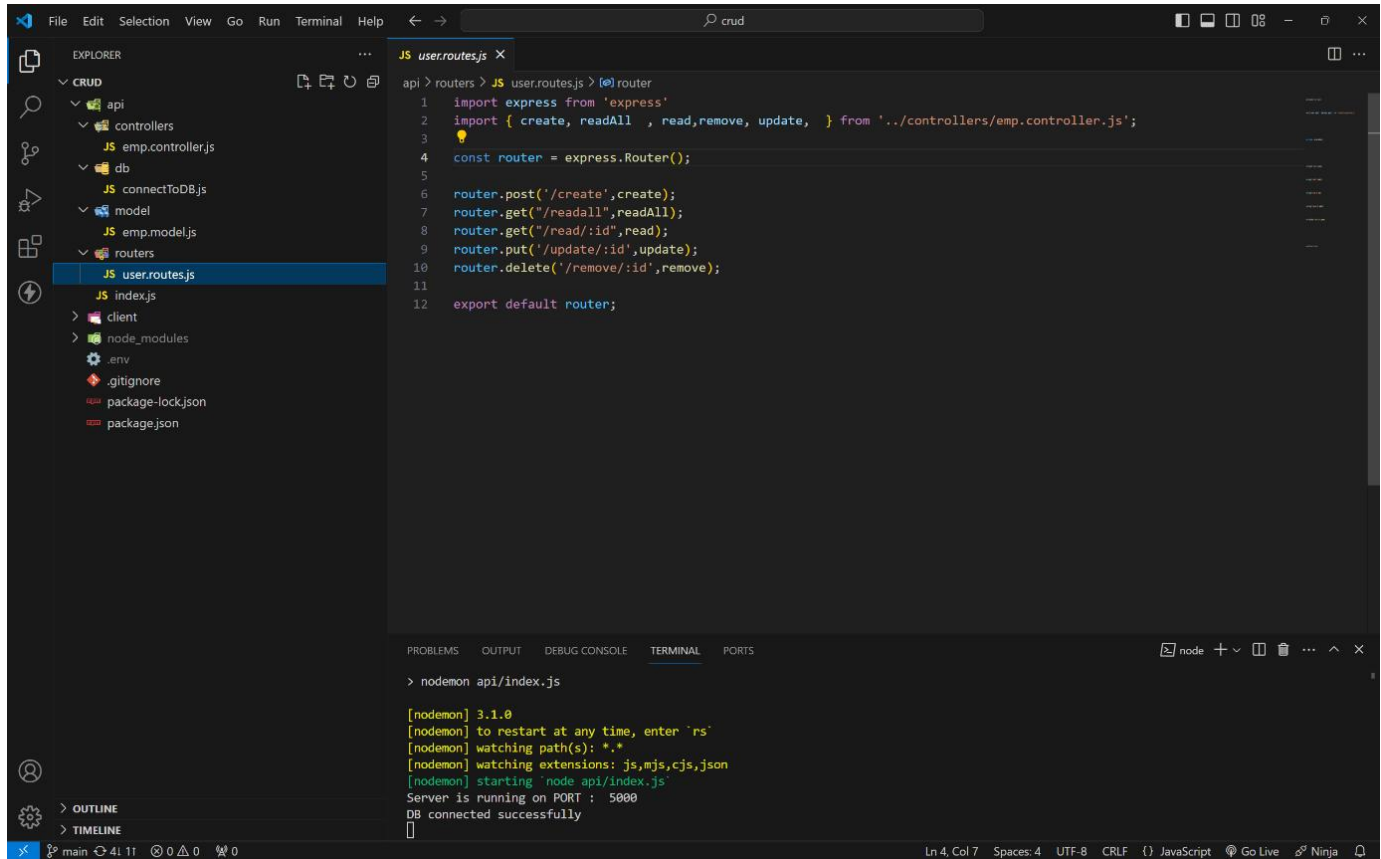

The screenshot shows the VS Code editor with the Explorer sidebar on the left. The file 'emp.model.js' is selected under the 'model' folder. The main editor displays the code for 'emp.model.js', which defines a 'userSchema' for a 'User' model with fields like 'username', 'empname', 'email', 'role', and 'salary'. The terminal at the bottom shows the command 'nodemon api/index.js' and the output indicating a successful connection to the database on port 5000.

```
api > model > JS emp.model.js > userSchema > role
1 import mongoose from 'mongoose';
2
3 const userSchema = new mongoose.Schema({
4   username:{
5     type:String,
6     unique:true,
7     required:true
8   },
9   empname:{
10    type:String,
11    required:true
12  },
13  email:{
14    type:String,
15    required:true
16  },
17  role:{
18    type:String,
19    required:true
20  },
21  salary:{
22    type: Number,
23    required: true,
24  }
25 },{timestamps:true})
26
27 const Emp = mongoose.model("User",userSchema);
28
29 export default Emp;
```

```
> nodemon api/index.js

[nodemon] 3.1.0
[nodemon] to restart at any time, enter `rs`
[nodemon] watching path(s): *.*
[nodemon] watching extensions: js,mjs,cjs,json
[nodemon] starting `node api/index.js`
Server is running on PORT : 5000
DB connected successfully
```

ROUTES:

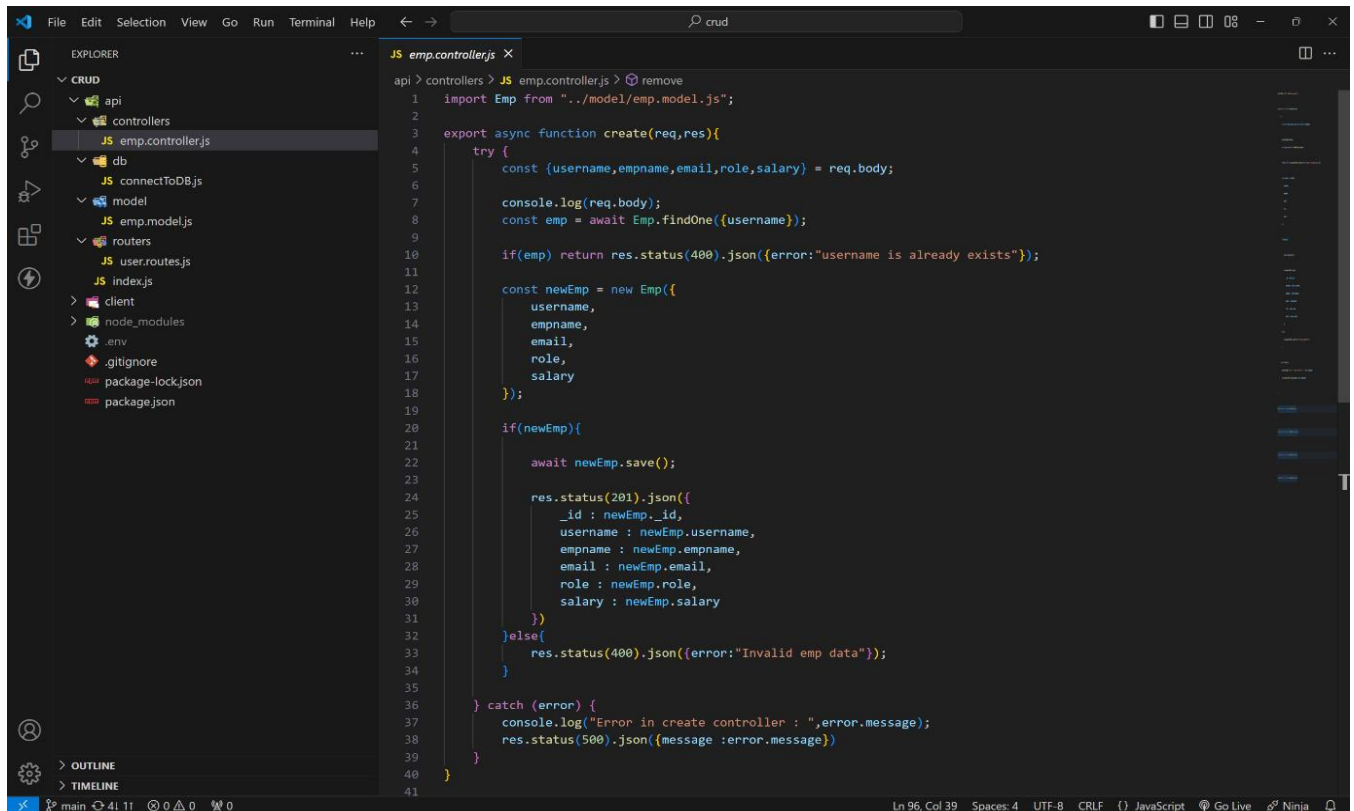

The screenshot shows the Visual Studio Code editor with the file explorer on the left. The file explorer shows a project structure with folders like 'api', 'controllers', 'db', 'model', 'routes', and 'client'. The file 'user.routes.js' is selected under the 'routes' folder. The main editor displays the code for 'user.routes.js', which imports 'express' and defines routes for creating, reading, updating, and deleting users. The terminal at the bottom shows the command 'nodemon api/index.js' being executed, and the output indicates that the server is running on port 5000 and the database is connected successfully.

```
api > routes > JS user.routes.js > @router
1 import express from 'express'
2 import { create, readAll, read, remove, update, } from '../controllers/emp.controller.js';
3
4 const router = express.Router();
5
6 router.post('/create', create);
7 router.get("/readall", readAll);
8 router.get("/read/:id", read);
9 router.put('/update/:id', update);
10 router.delete('/remove/:id', remove);
11
12 export default router;
```

```
> nodemon api/index.js

[nodemon] 3.1.0
[nodemon] to restart at any time, enter `rs`
[nodemon] watching path(s): *.*
[nodemon] watching extensions: js,mjs,cjs,json
[nodemon] starting 'node api/index.js'
Server is running on PORT : 5000
DB connected successfully
```

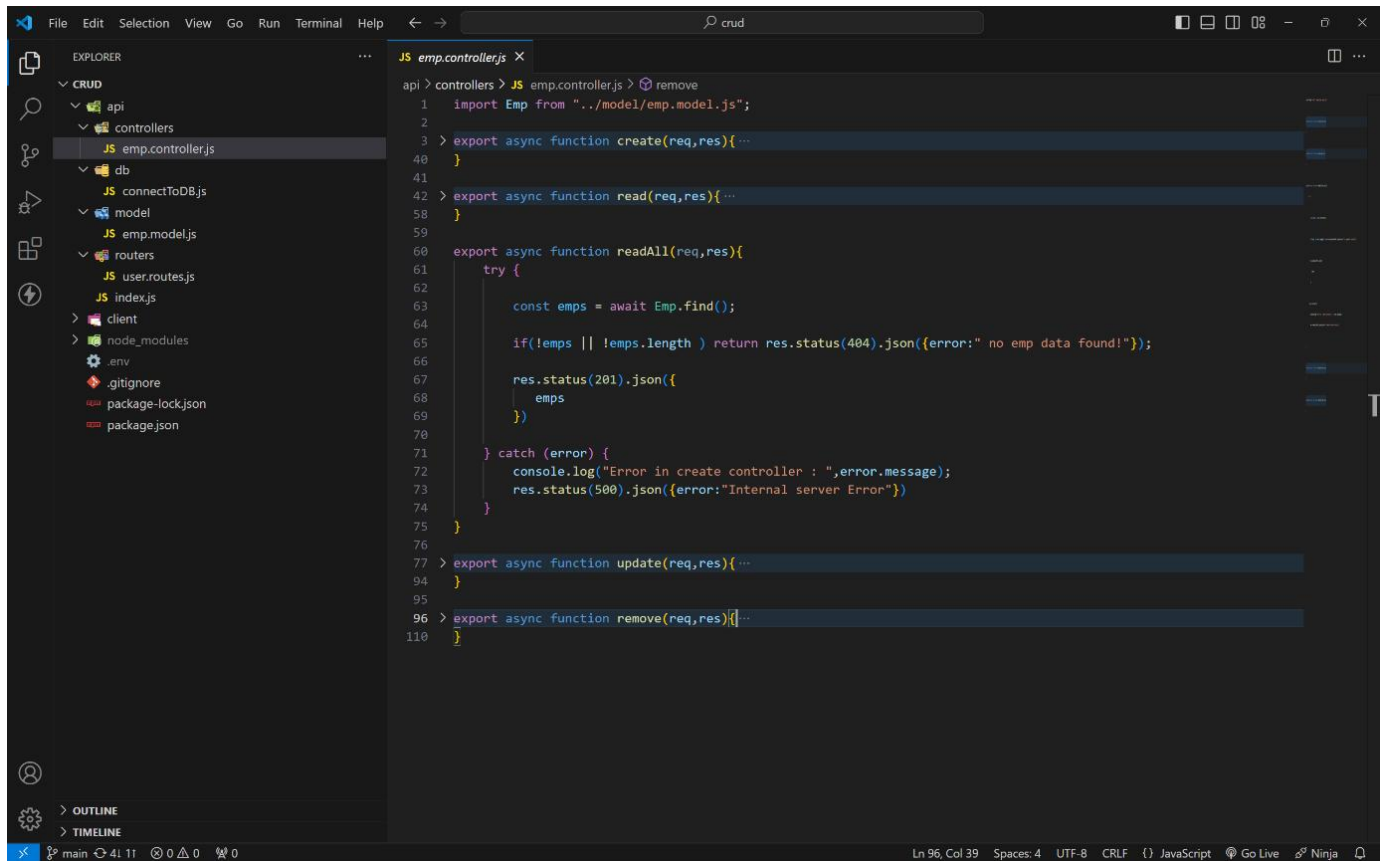

CONTROLLERS: CREATE :

The screenshot shows the Visual Studio Code editor with the file explorer on the left. The file explorer shows a project structure with folders like 'api', 'controllers', 'db', 'model', 'routes', and 'client'. The file 'emp.controller.js' is selected under the 'controllers' folder. The main editor displays the code for 'emp.controller.js', which imports 'Emp' from the model and defines an asynchronous function 'create' that takes 'req' and 'res' as arguments. The function checks if a user with the same username already exists, and if not, it creates a new user and saves it to the database. The terminal at the bottom shows the command 'nodemon api/index.js' being executed, and the output indicates that the server is running on port 5000 and the database is connected successfully.

```
api > controllers > JS emp.controller.js > @remove
1 import Emp from "../model/emp.model.js";
2
3 export async function create(req,res){
4   try {
5     const {username,empname,email,role,salary} = req.body;
6
7     console.log(req.body);
8     const emp = await Emp.findOne({username});
9
10    if(emp) return res.status(400).json({error:"username is already exists"});
11
12    const newEmp = new Emp({
13      username,
14      empname,
15      email,
16      role,
17      salary
18    });
19
20    if(newEmp){
21      await newEmp.save();
22
23      res.status(201).json({
24        _id : newEmp._id,
25        username : newEmp.username,
26        empname : newEmp.empname,
27        email : newEmp.email,
28        role : newEmp.role,
29        salary : newEmp.salary
30      });
31    }
32    else{
33      res.status(400).json({error:"Invalid emp data"});
34    }
35  } catch (error) {
36    console.log("Error in create controller : ",error.message);
37    res.status(500).json({message :error.message});
38  }
39 }
40
41
```

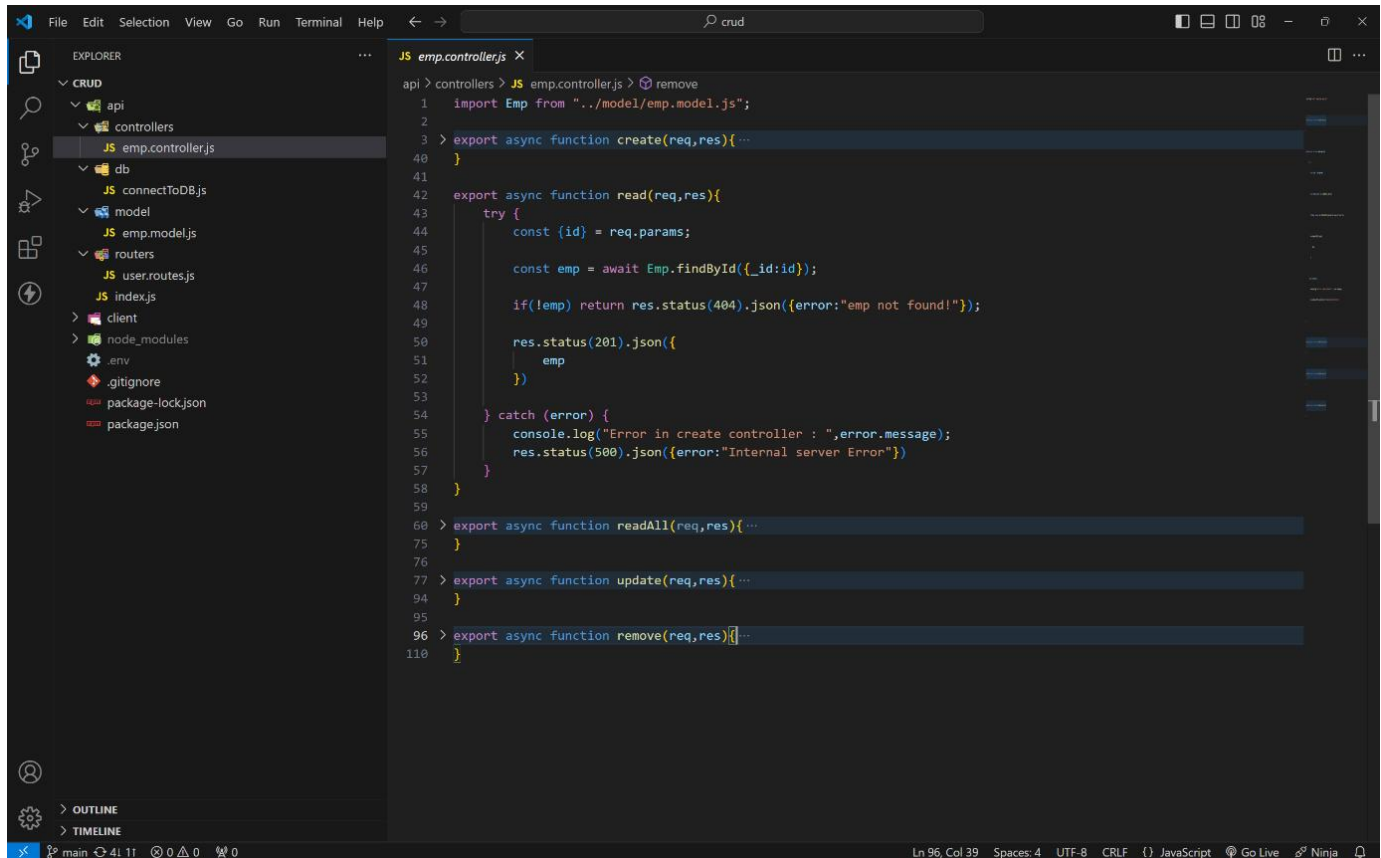

READALL:

The screenshot shows the VS Code editor with the file explorer on the left and the code editor in the center. The file explorer shows a project structure with a 'crud' folder containing 'api', 'controllers', 'db', 'model', 'routers', and 'index.js'. The 'api' folder contains 'emp.controller.js'. The code editor shows the implementation of the 'readAll' function in 'emp.controller.js'.

```
api > controllers > JS emp.controller.js > remove
1  import Emp from "../model/emp.model.js";
2
3  > export async function create(req,res){ ...
40 }
41
42 > export async function read(req,res){ ...
58 }
59
60 export async function readAll(req,res){
61   try {
62     const emps = await Emp.find();
63
64     if(!emps || !emps.length) return res.status(404).json({error:" no emp data found!"});
65
66     res.status(201).json({
67       emps
68     })
69   }
70 }
71 } catch (error) {
72   console.log("Error in create controller : ",error.message);
73   res.status(500).json({error:"Internal server Error"})
74 }
75 }
76
77 > export async function update(req,res){ ...
94 }
95
96 > export async function remove(req,res){ ...
110 }
```

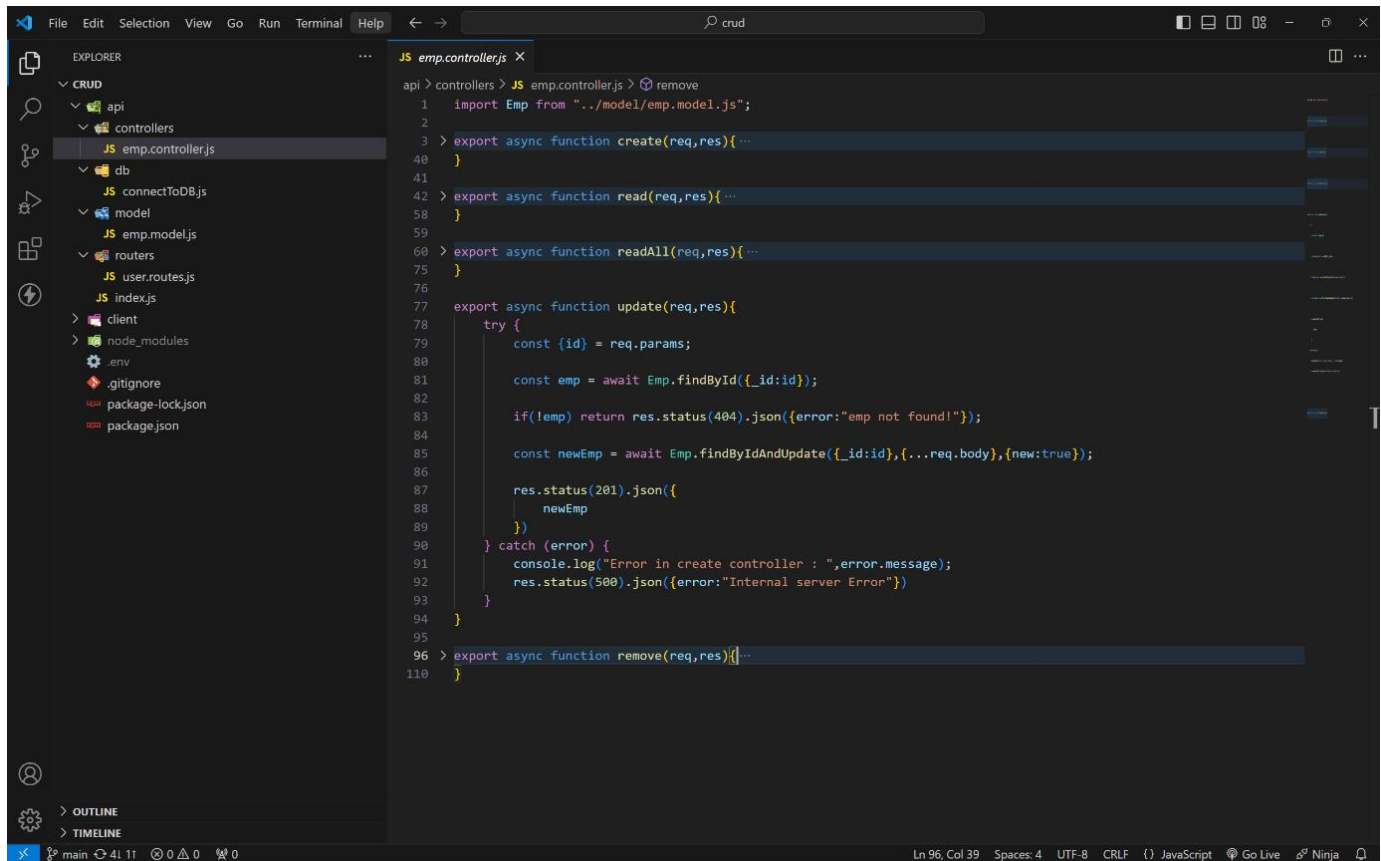

READONE :

The screenshot shows the VS Code editor with the file explorer on the left and the code editor in the center. The file explorer shows a project structure with a 'crud' folder containing 'api', 'controllers', 'db', 'model', 'routers', and 'index.js'. The 'api' folder contains 'emp.controller.js'. The code editor shows the implementation of the 'read' function in 'emp.controller.js'.

```
api > controllers > JS emp.controller.js > remove
1  import Emp from "../model/emp.model.js";
2
3  > export async function create(req,res){ ...
40 }
41
42 export async function read(req,res){
43   try {
44     const {id} = req.params;
45
46     const emp = await Emp.findById({_id:id});
47
48     if(!emp) return res.status(404).json({error:"emp not found!"});
49
50     res.status(201).json({
51       emp
52     })
53   }
54 } catch (error) {
55   console.log("Error in create controller : ",error.message);
56   res.status(500).json({error:"Internal server Error"})
57 }
58 }
59
60 > export async function readAll(req,res){ ...
75 }
76
77 > export async function update(req,res){ ...
94 }
95
96 > export async function remove(req,res){ ...
110 }
```

UPDATE :

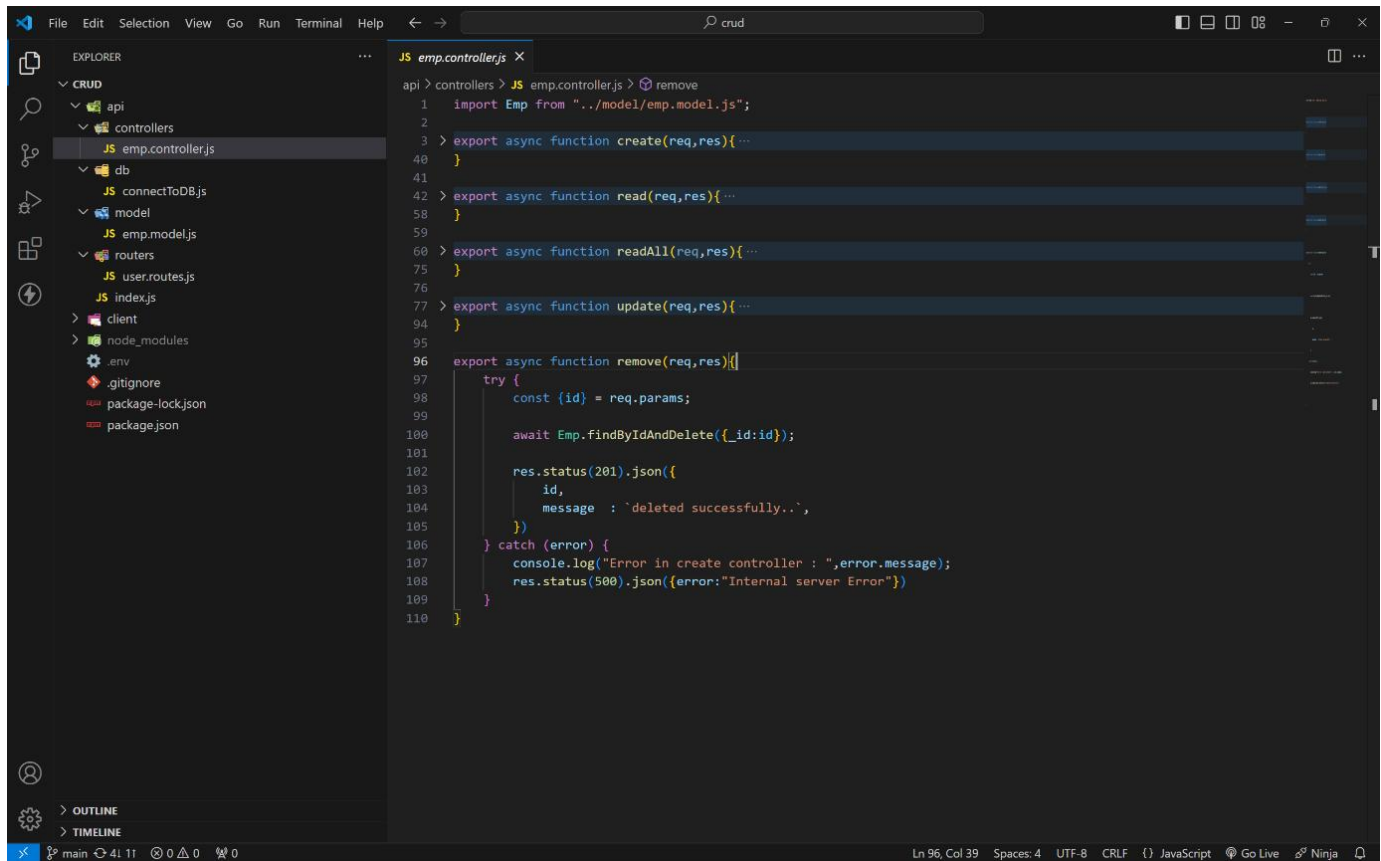

The screenshot shows a VS Code editor window with the file explorer on the left and the code editor in the center. The file explorer shows a project structure with a 'crud' folder containing 'api', 'controllers', 'db', 'model', 'routers', and 'index.js'. The 'emp.controller.js' file is selected in the 'controllers' folder. The code editor shows the following JavaScript code:

```
api > controllers > JS emp.controller.js > remove
1  import Emp from "../model/emp.model.js";
2
3  > export async function create(req,res){...
40 }
41
42 > export async function read(req,res){...
58 }
59
60 > export async function readAll(req,res){...
75 }
76
77 export async function update(req,res){
78   try {
79     const {id} = req.params;
80
81     const emp = await Emp.findById({_id:id});
82
83     if(!emp) return res.status(404).json({error:"emp not found!"});
84
85     const newEmp = await Emp.findByIdAndUpdate({_id:id},{...req.body},{new:true});
86
87     res.status(201).json({
88       newEmp
89     });
90   } catch (error) {
91     console.log("Error in create controller : ",error.message);
92     res.status(500).json({error:"Internal server Error"})
93   }
94 }
95
96 > export async function remove(req,res){...
110 }
```

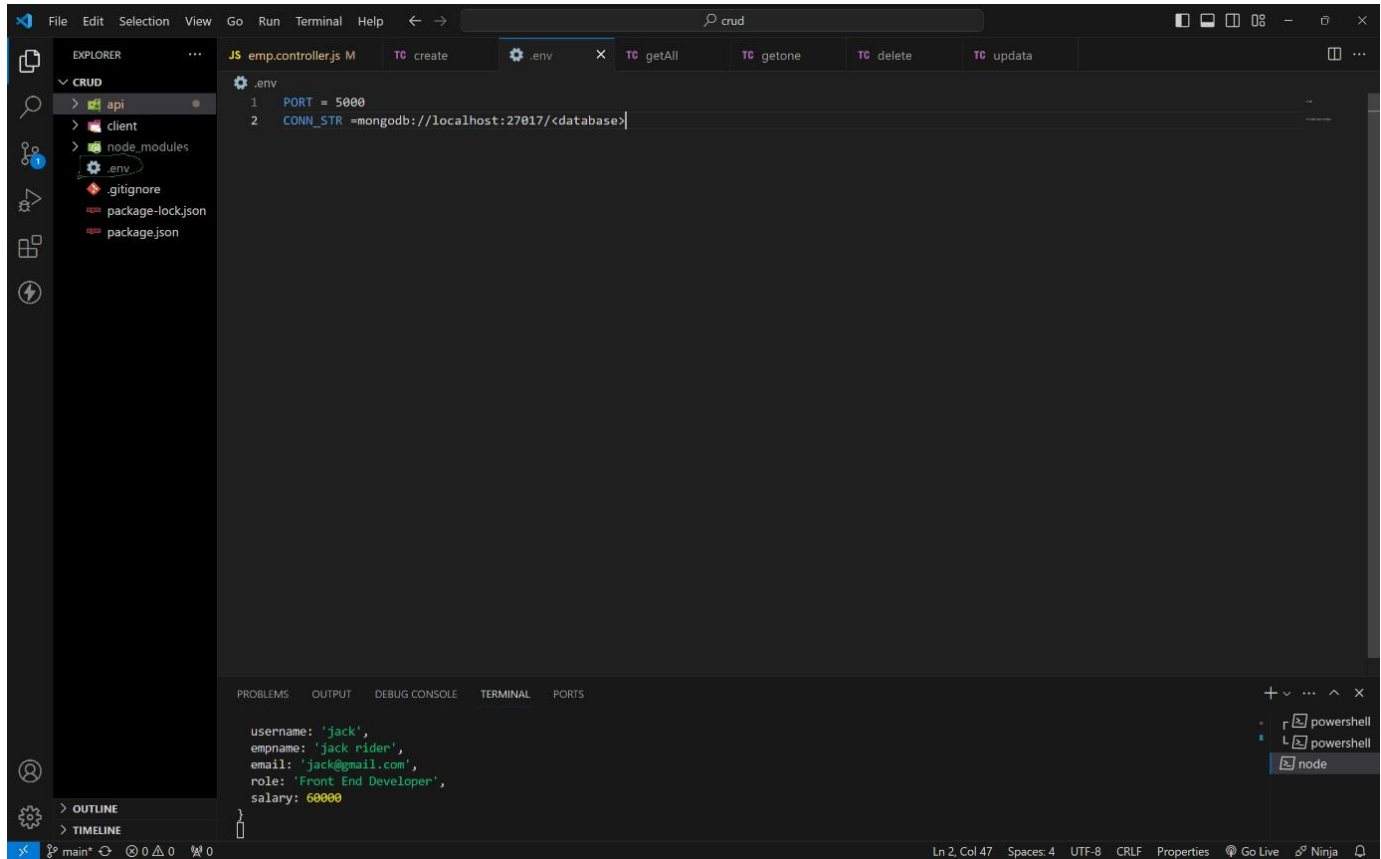

The status bar at the bottom indicates the file is at line 96, column 39, with 4 spaces, UTF-8 encoding, and CRLF line endings. The language is set to JavaScript.

DELETE :

HOW TO RUN ON LOCALLY :

- 1 . Create a folder as any name.
- 2 . Open that folder in any code editor (vs code).
- 3 . Open terminal (ctrl + ~) on code editor.
- 4 . Type this code to get code locally. git clone <https://github.com/4727yesuraju/crud.git>
- 5 . Now move to crud folder (cd crud in terminal)
- 6 . Ignore client folder.
- 7 . Here crud is root folder.
- 8 . In root folder create a .env file and create a PORT and CONN_STR variables and assign value.
ex : PORT = 3000 (commonly any number between 3000 - 8080).
CONN_STR = your mongodb_connection_string

--- trouble in above process ? :

simply paste this code in .env file .

PORT = 5000

CONN_STR=mongodb+srv://4727yesuraju:rough@cluster0.wbclvtg.mongodb.net

/?retryWrites=true&w=majority&appName=Cluster0

9 . After in terminal (in crud folder as root folder) type this command to server.

npm i (installing all dependencies)

npm run dev (to run server)

10 . if you get below message in terminal then your server will running Successfully

```
PS C:\Users\4727y\OneDrive\Desktop\internshala\crud> npm run dev

> crud@1.0.0 dev
> nodemon api/index.js

[nodemon] 3.1.0
[nodemon] to restart at any time, enter `rs`
[nodemon] watching path(s): *.*
[nodemon] watching extensions: js,mjs,cjs,json
[nodemon] starting `node api/index.js`
Server is running on PORT : 5000
DB connected successfully
```

route and its functionality :

For this use any API using tools like Postman or Thunder Client.

i use THUNDER CLIENT.

CREATE ROUTE :

1 . This route is used to create a new employee in database with a below fields.

username, empname, email, role, salary

2 . in thunder client click on new request and select this options method as post

url as http://localhost:5000/api/user/create

pass this json data as a body as your required value.

{

"username": "jack",

"empname": "jack rider",

"email": "jack@gmail.com",

"role": "Front End Developer",

"salary": 60000

}

3 . finally press send to insert data in mongodb data base and get a inserted data as a response.

4 . If user is already in db it will return User is already exist as response.

for more details visit below output images...

READONE :

1 . This route is used to read specific user info by passing that user id as a param.

method as get

url as

http://localhost:5000/api/user/read/65ed7b3d76e1dcc9a51654ca

2 . After sending you will get that specific user details as response.

READALL :

1 . Read all route is used to get all the user data existing in the mongodb data base .

method as get

url as `http://localhost:5000/api/user/readall`

2 . After sending you will get that all user details as response.

UPDATE :

1 . This route is used to update specific user by passing that user id as a param. method as put

url as `http://localhost:5000/api/user/update/65ed7b3d76e1dcc9a51654ca`

2 . After sending you will get updated user details as response.

DELETE :

1 . This route is used to delete specific user by passing that user id as a param. method as delete

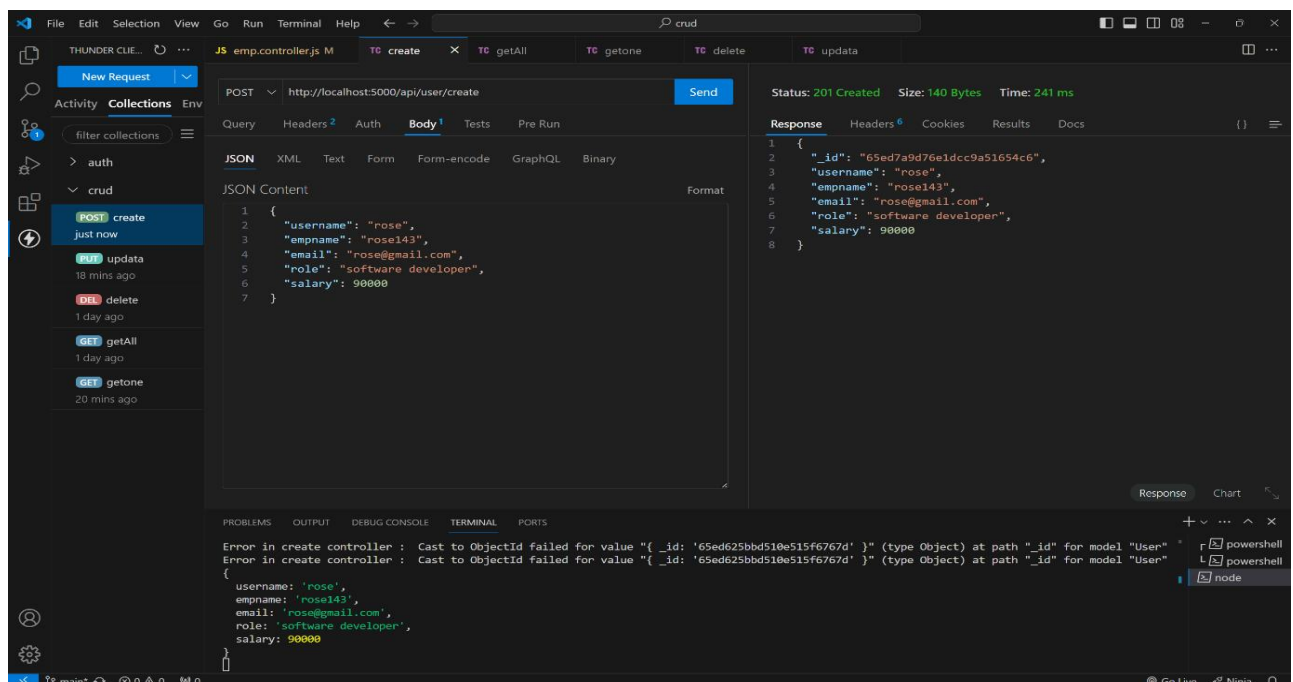

url as

`http://localhost:5000/api/user/delete/65ed7b3d76e1dcc9a51654ca`

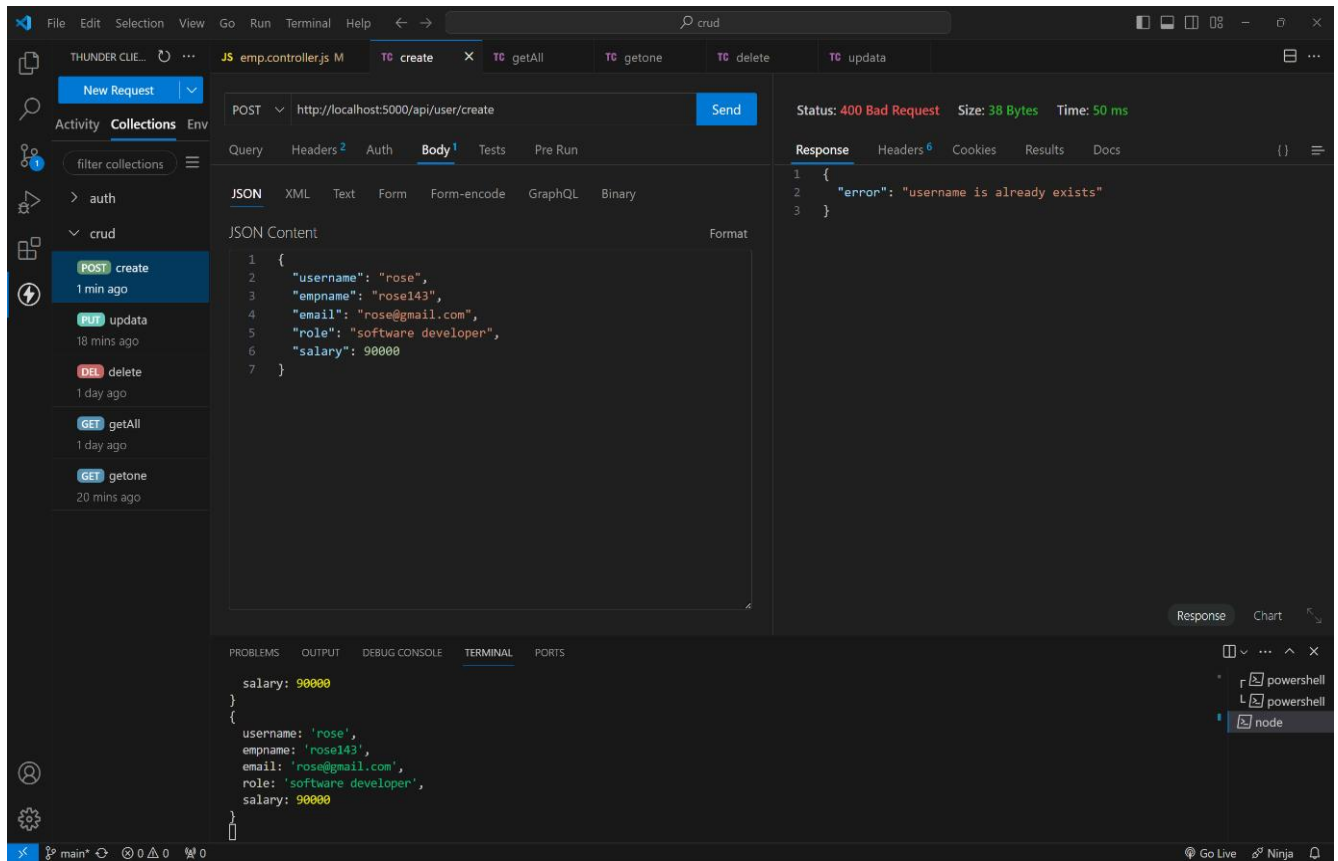

2 . After sending you will deleted successfully as response.

OUTPUT :

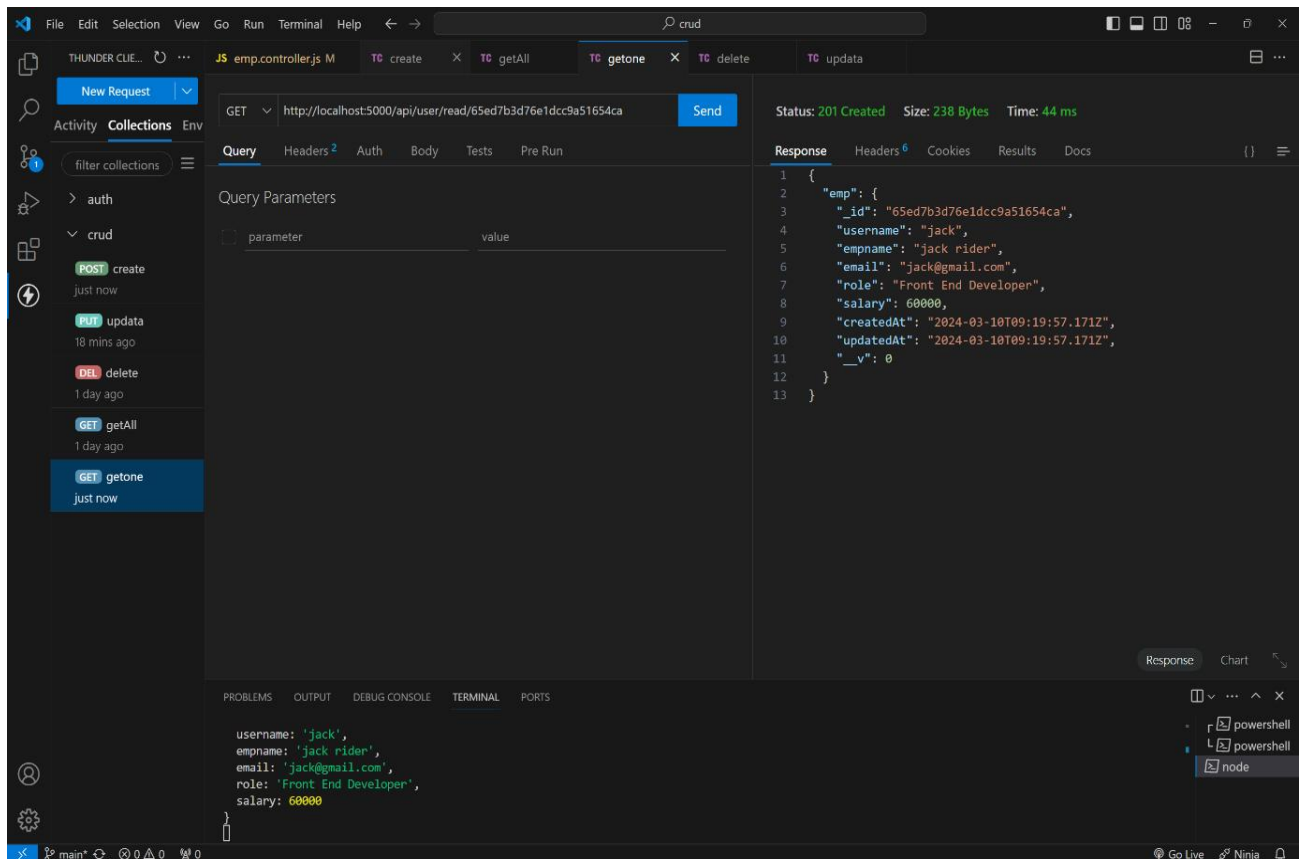

CREATE A NEW USER :

CREATING USER WITH EXISTING USERNAME :

READONE :

READ ALL :

The screenshot shows the Thunder Client interface with a collection named 'crud'. The 'getAll' request is selected, showing a GET request to `http://localhost:5000/api/user/readall`. The response is a JSON array of two user objects, with a status of 201 Created, size of 468 Bytes, and time of 130 ms.

```
GET http://localhost:5000/api/user/readall
```
